

Web Scraping Intern Assignment

Project: Book Data Extraction

Overview

Scrape book data from a fixed e-commerce website and extract minimum 500 book records with proper pagination handling.

Task Details

Website URL (Fixed):

`https://books.toscrape.com/`

- The site contains 1000 book results
- Displays 20 results per page
- **Your objective:** Extract minimum 500 book records

Technical Requirements

Allowed Technologies:

- **Python:** Scrapy, BeautifulSoup, Selenium, Playwright
- **Node.js:** Node-Crawler, Puppeteer, Cheerio, Playwright
- Any equivalent web scraping/automation framework

Must Implement:

- Automatic pagination across multiple pages
- Request delay/throttling to avoid blocking
- Basic error handling (retry on failed requests)
- Follow robots.txt rules (responsible scraping)
- Export data to CSV or JSON format

Data Fields to Extract

Each book record must include:

1. **Title**
2. **Price**
3. **Rating** (star rating)
4. **Stock availability** (In stock / Out of stock)
5. **Product detail page link**
6. **Image URL**

Deliverables

Submit via Google Form: <https://forms.gle/KdwCX2SNhQa59jct7>

Project ZIP File Containing:

1. Complete source code
2. Output file (CSV or JSON) with 500+ records
3. README.md file
4. Exclude node_modules or venv folders

README.md Must Include:

- Website URL used
- Fields extracted
- Total records collected
- Pagination method used
- Challenges faced and solutions
- Step-by-step instructions to run the script
- Dependencies/requirements
- Your name and email

Evaluation Criteria

- **Functionality:** Does the scraper collect 500+ records correctly?
- **Code Quality:** Clean, readable, well-structured code
- **Error Handling:** Proper retry logic and exception handling
- **Pagination:** Correct implementation of page navigation
- **Documentation:** Clear README with setup instructions
- **Responsible Scraping:** Request delays, robots.txt compliance

Timeline

Duration: 48 hours from receipt

Good luck! 🚀
